Karan Malhotra

karan.malhotra@example.com | +91 98765 43214 | 5 years experience

Target Role	Senior Software Engineer / Backend Systems
Work Authorization	Eligible for remote and hybrid opportunities
Preferred Domain	SaaS platforms, cloud infrastructure, developer tools

Skills

- AWS, Azure, GCP
- Kubernetes, Docker, Terraform
- Ansible, Jenkins, CI/CD, Git
- Bash, Python scripting

Experience

- DevOps Engineer at CloudOps (2021-Present)
- Systems Administrator at Infra Services (2019-2021)

Certifications

- Certified Kubernetes Administrator
- AWS Solutions Architect - Associate

Selected Achievements

- Lowered mean time to recovery through incident drill program.
- Standardized deployment templates across 14 services.
- Implemented proactive cost and reliability guardrails.
- Built Terraform modules reused by multiple product teams.
- Introduced release governance and environment parity checks.
- Created Python scripts for cluster diagnostics and release audits.

Project Highlights

- Delivered measurable engineering outcomes in project iteration 1, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 2, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 3, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 4, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 5, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 6, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 7, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 8, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 9, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 10, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 11, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 12, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 13, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 14, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 15, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 16, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 17, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 18, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 19, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 20, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 21, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 22, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 23, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 24, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 25, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 26, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 27, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 28, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 29, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 30, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 31, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 32, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 33, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 34, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 35, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 36, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 37, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 38, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 39, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 40, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 41, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 42, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 43, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 44, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 45, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 46, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 47, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 48, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 49, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 50, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 51, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 52, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 53, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 54, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 55, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 56, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 57, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 58, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 59, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 60, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 61, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 62, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 63, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 64, including reliability improvements, code quality standards, and better release readiness.
