Priya Nair

priya.nair@example.com | +91 98765 43213 | 4 years experience

Target Role	Senior Software Engineer / Backend Systems
Work Authorization	Eligible for remote and hybrid opportunities
Preferred Domain	SaaS platforms, cloud infrastructure, developer tools

Skills

- Python, R, Machine Learning
- PyTorch, TensorFlow, Scikit-Learn
- Pandas, Numpy, NLP, LLM, RAG
- SQL, PostgreSQL

Experience

- Data Scientist at AI Research Labs (2022-Present)
- ML Engineer at DataCorp (2020-2022)

Certifications

- TensorFlow Developer Certificate
- AWS Data Analytics Specialty

Selected Achievements

- Built model serving pipeline with <200ms median latency.
- Reduced feature pipeline cost by 23% with storage tier strategy.
- Implemented model monitoring with drift and quality signals.
- Worked with product team on ranking-service experimentation.
- Built Python inference services consumed by backend apps.

Project Highlights

- Delivered measurable engineering outcomes in project iteration 1, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 2, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 3, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 4, including reliability improvements, code quality standards, and better release readiness.
- Delivered measurable engineering outcomes in project iteration 5, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 6, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 7, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 8, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 9, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 10, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 11, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 12, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 13, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 14, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 15, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 16, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 17, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 18, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 19, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 20, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 21, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 22, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 23, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 24, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 25, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 26, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 27, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 28, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 29, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 30, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 31, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 32, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 33, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 34, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 35, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 36, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 37, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 38, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 39, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 40, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 41, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 42, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 43, including reliability improvements, code quality standards, and better release readiness.

- Delivered measurable engineering outcomes in project iteration 44, including reliability improvements, code quality standards, and better release readiness.
